EditorConfig

What is EditorConfig?

EditorConfig helps developers define and maintain consistent coding styles between different editors and IDEs. The EditorConfig project consists of a file format for defining coding styles and a collection of text editor plugins that enable editors to read the file format and adhere to defined styles. EditorConfig files are easily readable and they work nicely with version control systems.

What's an EditorConfig file look like?

Example file

Below is an example .editorconfig file setting end-of-line and indentation styles for Python and JavaScript files.

```
# EditorConfig is awesome:
http://EditorConfig.org
# top-most EditorConfig file
root = true
# Unix-style newlines with a newline ending
every file
```

These editors come bundled with native support for EditorConfig. Everything should just work.

Download a Plugin

To use EditorConfig with one of these editors, you will need to install a

```
# editorconfig.org
root = true
[ * ]
indent_style = space
indent_size = 2
end_of_line = lf
charset = utf-8
trim_trailing_whitespace =
true
insert_final_newline = true
[*.md]
trim_trailing_whitespace =
false
```

■ .editorconfig

Demo

.editorconfig

Wrap Up

Editor

- Atom, WebStorm, Brackets, VSCode

Maintain consistency

- Prettier or .editorconfig
